FOR HOME AND INDUSTRY

HÖRMANN

Discover a new feeling of home: high-quality residential doors

Our home is the centre of our life, our safe haven, our oasis of well-being.

As a family business, this spurs us on to provide products made in Germany to give you that special feeling of being at home. Our high-quality residential doors contribute to this and provide your home with that extra cosy feeling.

Whether classic or modern, white lacquer or beech, with glass elements or stainless steel embellishments – Hörmann offers you the residential door that suits you and your furnishings perfectly.

How to find the right residential doors

There are several decisions to make when purchasing internal doors.

Which door leaf version should I choose?

Which material suits my style and needs?

So that you can see all the options when buying a door, we have listed the most important details that you should consider when deciding on residential doors:

Choosing the right surface finish

Most manufacturers offer internal doors with real wood veneers, paint or CPL coating. Especially in households with children and pets, it is worth choosing the very robust Duradecor surface. High-quality surfaces are also easy to clean. Tip: Ask your dealer about impact-resistant 4Protect edges, as these prevent unattractive flaws for a long time.

It's what's on the inside that counts

The choice of door inlay depends on how often the door is used and how durable a door is. A tubular chipboard insert offers the best value for money. Hörmann also offers high-quality composite timber door leaves as well as inexpensive tubular chipboard spacers and honeycomb inserts. For further information, see page 93.

Door leaf shape

You can choose between a rebated and a flush-closing door leaf. Rebated means that the edge of the door leaf rests on the frame a little when closed. Flush-closing means that the door leaf forms a level surface with the frame when closed. For further information, see page 12.

People with classic furnishings tend to choose the rebated version, while the flush version goes particularly well with a modern decorating style.

Type of fittings – lever handles, rose escutcheons and hinges

The lever handle sets are just as varied as the doors themselves and can be selected to suit your taste. Lever handle sets consist of a lever handle and rose escutcheon. Hörmann offers door handles and keyholes in many different shapes and stainless steel nuances. Glossy, matt or a combination of both: Simply choose the lever handle set to match your interior. Those who prefer a modern style can choose flush-fitting lever handles embedded in the door leaf – a particularly elegant appearance without drilled keyhole. Concealed hinges that invisibly connect the door leaf and door frame complement this perfectly.

Door frame

A timber frame can be chosen in angular or rounded versions to match the timber doors. In households with children, it is worth combining the internal doors with steel frames. These are especially robust and can withstand “accidents” with toy cars or run-ins with the vacuum cleaner or a crate of bottles. There is no visible difference between a VarioFix steel frame and a timber frame.

High-quality composite timber door leaf

Elegant, flush-fitting lever handle without drilled keyhole

Robust steel frame VarioFix

“A good reputation must be earned.”

August Hörmann

In keeping with the tradition started by the company's founder, the name Hörmann delivers brand name quality with extensive product expertise. The family business has over 80 years of experience as a construction component specialist and sees itself as your partner from the very beginning of building and renovation projects. It's no surprise that Hörmann is one of Europe's most successful internal door providers. All this makes Hörmann internal doors a reassuring purchase.

1 Quality products from Germany

All doors and frames are developed in-house by Hörmann. The doors are manufactured based on quality, environmental, energy and workplace safety management guidelines acc. to DIN EN ISO 9001, 14001, 50001 and BS OHSAS 18001 in a modern German factory. In addition, our highly qualified employees work intensively on new products, **continual further developments and improvements to details.** The results are patents and unique products on the market.

2 Internal doors for generations

We are convinced of our products and our uncompromising quality assurance. You can enjoy a Hörmann residential door for years to come **because you are literally choosing a “door for life”**.

3 An eye on the future

Hörmann is setting a good example. This is why the company obtains **100 % of its energy consumption from green sources**. Together with an intelligent and certified energy management system, CO₂-neutral mailing and the recycling of valuable materials, more than **40000 tons of CO₂ are saved each year**. And last but not least, Hörmann also offers products for sustainable construction.

4 Flush-fitting: Planar handle

For a **particularly elegant look**, equip your door with the Planar handle. Its **absolutely flush-fitting rose escutcheon**, perfectly recessed in the door leaf, certainly impresses fans of design, whilst perfect elegance is achieved by the flush-closing doors with concealed hinges. Another fine detail: The omission of the keyhole drill holes means the design looks even more reduced and therefore more elegant.

For further information, see page 80.

5 4 × 4-concept: DesignLine Concepto

Sophisticated and versatile: The doors of **the DesignLine Concepto offer you new design options for your home**. Combine the high-quality ultra matt, gloss (high-gloss), slate and the new linen surface finishes with the Traffic white, Light grey, Anthracite grey and the new Taupe colour variants.

Read more details about the easy-care and robust surface finishes from page 19.

6 Nano-coating: all-glass doors

Do you want a **light-flooded home**? Then our all-glass doors are the perfect choice for you. Apart from its elegant door appearance, the GlassLine also convinces with regard to ease of care: All styles with sand-blasted glass are equipped with nano-coating for fewer fingerprints.

Styles matching DesignLine Groove and Concepto

Matching all-glass doors are available for the DesignLine Groove and DesignLine Concepto styles for the perfect mix of timber and glass doors.

7 See and touch: Duradecor texture

The finely textured surfaces allow you to **feel what you see**. A wood grain texture is embossed into the door leaf, making the characteristic wood structure of the Duradecor texture surface tangible. This emphasises the **cosy and natural living atmosphere** in your home and is also extremely easy-care and hard-wearing.

For further information, see page 87.

8 Extremely impact-resistant: Duradecor surface

The high-quality surface will delight you:
Duradecor features **maximum shock resistance that is 48 % better** than the average of the tested CPL surfaces from other manufacturers. It is also resistant, easy-care and heat-resistant, allowing you to enjoy your door for years to come.

For further information, see page 86.

9 Permanent resistance: 4Protect edge protector

Our rebated doors with angular edges and our flush-closing doors with Duradecor White lacquer, Light grey, Anthracite grey and Taupe surface finishes **are equipped as standard with the high-quality 4Protect edge protector.**

This makes your timber internal doors more resistant against everyday stress so you can enjoy them for many years to come.

For further information, see page 13.

10 High-quality and elegant: timber frame

Our timber frames impress with an **attractive round edge** and an **edge radius of 3 mm** **1**. The 25-mm-thick lining board **2** and the robust Duradecor surface **3** provide a **high-quality and elegant view** of your new residential door.

For further information, see pages 90 – 91.

11 Beautiful and robust: steel profile frame

VarioFix is the name of our steel profile frame, which offers you many advantages: With the adjustable decorative rebate, it is **fitted as simply** as a timber frame. It is also **extremely durable** thanks to its high strength. In terms of design, its elegant shape impresses without visible foldback. The VarioFix steel profile frame matches the timber frames, with a frame face of 55 mm perfectly **suited to timber frames**.

Rebated door leaf with rounded edges

Rebated version with round edges

If you value a harmonious overall view, you will make the right choice with this version: The door leaf rests on the frame and impresses with rounded door leaf edges in a **harmonious look**. The rebated door view with round edges is available for all timber internal doors, except DesignLine Stripe and ClassicLine Montana.

Horizontal view of door leaf

Rebated door leaf with angular edges and 4Protect edge protector

Rebated version with angular edges

If you appreciate a particularly streamlined look, then we recommend this version. The door leaf rests on the frame and has a **beautifully designed, angular edge**. It is available for all timber internal doors, except ClassicLine Virginia and ClassicLine Carolina. This version impresses in the Duradecor surface finishes with 4Protect edge protector and in the painted surface finish **with a perfect joint-free look**.

Horizontal view of door leaf

Flush-closing door leaf

Flush version

Would you love an **exclusive door view with a virtually flush-fitting transition** to the frame in your home? Then we recommend the flush-closing door leaf, which harmonises especially well with a modern home style. This version is available for all timber doors with the exception of ClassicLine Virginia and ClassicLine Carolina. This version impresses in the Duradecor surface finishes with 4Protect edge protector and in the painted surface finish with a **perfect joint-free look**.

Horizontal view of door leaf

Perfect joint-free look for an extra high-quality door view

4Protect edge protector

The 4-fold edge protector for **flush-closing door and rebated doors with angular edges** in the Duradecor finish White Lacquer, Light grey, Anthracite, Taupe, White Parchment, Light grey Parchment, White Ash and Brushed White impresses with captivating features:

1. High impact resistance
2. High wear resistance
3. High scratch resistance
4. **Perfect joint-free look**, meaning that unlike conventional doors, no visible joints disturb the high-quality appearance of the door.

Conventional door leaf with visible joint

Timelessly elegant: BaseLine timber internal doors

Do you value the feel-good character in your home? Then the door models in the BaseLine series offer you the perfect selection. The door leaf in a flush or rebated version, combined with your preferred colour or your preferred decor creates a homely atmosphere that invites you to relax.

All BaseLine timber internal doors are available in the high-quality surfaces Duradecor smooth, Duradecor textured, lacquer and real wood veneer. There are a variety of colours and decors available for perfect harmony with your interior design style. For even more individuality, we offer you almost every preferred colour as a HPL surface finish. Or would you like to design your internal doors yourself? Then choose the paintable priming film. Discover all design possibilities on the next pages.

Duradecor smooth

The extremely impact-resistant Duradecor surface finish is the right choice for your home. Whether elegant White lacquer, modern grey or cosy timber decors, whether with or without glazing cut-out – you are sure to find an internal door to your taste. Our flush-closing doors and rebated doors with angular edges in the Duradecor White lacquer, Light grey, White Parchment, Light grey Parchment and White Ash surface finishes are equipped with the high-quality 4Protect edge protector as standard.

White lacquer RAL 9016

Duradecor texture

The Duradecor texture surface stylishly unites a feeling of real wood with ease of care. It represents the natural character of timber in a subtle way: A wood grain texture is embossed into the door leaf, making the characteristic wood structure tangible. Flush-closing doors and rebated doors with angular edges in the Duradecor textured surface finish Brushed White are equipped with the high-quality 4Protect edge protector as standard.

Sliding door – when is it worth it?

Anyone thinking about the interior design of a house or apartment has to decide which doors should be used in the individual rooms. Alongside classic internal doors with a door leaf that opens into the room, there are also space-saving sliding doors that run in front of or into the wall.

Such doors are especially practical if the available space in a room is not sufficient for a classic door. Sliding doors are real space-savers and represent practical convenience in your own home.

What are the advantages of sliding doors?

With sliding doors you gain more space in your home, if they run inconspicuously into the wall. Sliding doors are also available in many different designs to match your style of living.

What types of sliding doors are available?

Sliding doors for internal rooms are available in a range of designs to suit your living situation. There are two basic versions available, consisting either of one door (single-leaf) or two doors (double-leaf). Both versions can:

- Run into the wall
- Run in front of the wall

The brush seal included as standard from Hörmann and an inlet seal in the inlet box protect against odours from the kitchen, noise and draughts. Sliding doors can be equipped with a lock on request.

Applications for sliding doors

There are no limits to the imagination in the use of sliding doors. They are perfect for use as a flexible room divider and also give structure to spacious rooms. Sliding doors are also a practical solution for small apartments because there is no door leaf to swing into the room. A home office desk, for example, can be clearly separated from the living room with the help of sliding doors. Anyone who would like an open-plan kitchen without having cooking odours in the entire apartment can fit a sliding door between the kitchen and dining room. It is best to keep the door closed while cooking, then simply open it to serve and enjoy all of the advantages of an open kitchen. Fitted between the living room, dining room or hallway, a sliding door can protect against draughts; the glass version can also bath your home in bright, natural light.

Which design options are available for sliding doors?

At Hörmann you also have **numerous design options** in the area of sliding doors and can be sure to find the door that best suits your living style. Sliding doors are available in **single-leaf and double-leaf** versions for all door styles from the **BaseLine**, **DesignLine** and **GlassLine**.

If you like it timelessly elegant, we recommend the **BaseLine** doors. On the other hand, if you value special and individual equipment with stainless steel applications, recessed joints or high-quality coating, then you will find what you are looking for in the **DesignLine**. **GlassLine** sliding doors ultimately offer you more light and openness for your home.

Further information on Hörmann sliding doors can be found on pages 76 – 77.

For the door of your dreams: DesignLine

Create the door of your dreams with DesignLine. Whether style elements such as stainless steel embellishments, recessed joints or modern all-glass doors, whether real wood veneer or high-quality paint – the DesignLine offers a variety of door styles.

With the DesignLine residential doors and their different versions, discover the door that matches your home in terms of design, colour and decor.

For fans of classic and elegance: ClassicLine

Do you want a classic look that's also modern? Then our timeless ClassicLine styles are the perfect choice for you. Discover your favourite door for the perfect country house style.

All styles in this series convince with handcrafted details in the best carpenter's quality:

The particularly high-quality doors Georgia with their inlaid profile strip. The Carolina styles with embossed profiling, the new Montana with high-quality reconditioned frames, the new Kontura styles with contour-milled profiles and the Virginia panel doors with their elegant design.

The same applies to the ClassicLine:

Depending on the door version, you can choose between the Duradecor smooth and the Duradecor textured, lacquer or decor finishes as well as many colours and decors.

For further information, see pages 86 – 89.

More light for your home: GlassLine

GlassLine doors offer you many clear advantages: Glass doors are upmarket and chic, contributing an open design for your home and lending each room a particular charm.

Discover the design that best suits your home and choose between hinged doors, all-glass doors with timber frames or sliding doors.

Special and very individual accentuation is set with the new tinted styles, which give your glass door a striking colour nuance.

Sand-blasting

If you value individuality: The sandblasting technique draws delicate designs in the glass surface. The matt surface finish with nano-coating guarantees fewer fingerprints.

Glass type clear

With this type of glass, the glass door creates a subtle, interesting contrast. The iron oxide in the glass produces a slight “green shimmer” meaning that the view of the glass door and the interior appear in a “different light”.

Mirastar ■ NEW

Single-pane safety glass,
mirrored and translucent
look on both sides

Glass type Clear White

Glass doors with the Clear White glass type appear in radiant white. The design in Satinato look is particularly effective on design glass and Clear White is our recommendation also in the versions with laminated safety glass and internal white film.

Intelligent functions for more security and convenience

Your apartment entrance door can be equipped with many additional functions at Hörmann: Acoustic insulation, fire and smoke protection as well as additional security features such as a spyhole or an automatic door opener can be selected for many styles.

You can increase your everyday living comfort with innovative solutions such as the SmartKey radio door lock operator. You can open your door easily at the push of a button with your handheld transmitter, radio internal push button, the BiSecur app on your smartphone or directly via the sensor field on the SmartKey.

The PortaMatic door operator is recommended for everyone who is physically disabled or would simply like more convenience. Automatically closing and opening the doors via a hand transmitter or button means improving your quality of life – thanks to Hörmann.

Hörmann apartment entrance doors and fire-rated doors offer more:

More functions than conventional doors. Equip your new Hörmann door to meet your individual needs with important additional functions such as fire protection, acoustic insulation or other security elements. In addition, Hörmann supplies wet and damp room doors, jack knife and double-action doors as well as hatches.

Climatic class 3

Doors in this class feature a special door leaf design, which balances the temperature and moisture variations between rooms with different uses, such as between an unheated cellar and a warm hallway. The effect: energy savings and protection against door warpage.

Acoustic insulation

Acoustic-rated doors are in demand in places where it can be very loud in apartments or offices. The connection between the door and frame is crucial. It is an essential component for guaranteeing the required acoustic insulation.

Security

Suitable special functions can significantly reduce the risk of break-in. Hörmann recommends the resistance class RC 2 or better RC 3 for apartment entrance doors.

Fire protection

Fire protection can save lives! A suitably equipped door can protect against penetrating flames (for at least 30 or 90 minutes), but also prevent the penetration of dangerous combustion gases. Fire and smoke-rated elements are only available as a complete package which includes the frame and all fittings.

Climate and apartment entrance doors

Radio door lock operator SmartKey

Easily open your door lock at a press of a button with your hand transmitter, radio internal push button, BiSecur app on your smartphone* or directly via the sensor field on the SmartKey. No need to set down your groceries in order to open your entrance and apartment door. Even with a walker, wheelchair or pram, it is much easier to enter your house or apartment, because you can open the door from a distance. Locking takes place either by pressing a button or automatically after a specified period of time. This securely locks your door and provides protection against burglary.

The inexpensive radio door lock operator SmartKey is available in white or silver, incl. hand transmitter HSE 4 SK BS with labelled buttons.

High level of operating comfort

- Locking or unlocking the door
- Opening the door (the door latch is retracted for a defined time and the door can be easily pushed open) **1**
- Operation via hand transmitter, radio internal push button or BiSecur app **2**
- Automatic comfort locking, either after 30, 60 or 120 s or with a delay after pressing a button **3**
- Manual opening and closing possible at any time, in case of emergency** (from the outside using an ordinary key, from the inside using a hand wheel)

Secure control

- Acoustic / visual feedback on the operator, if the door lock was locked / unlocked or opened
- Enquiry on the optional hand transmitter HS 5 BS or radio internal push button FIT 5 to determine whether the door is locked or unlocked – you no longer have to go to the door in the evening to check whether it is locked. **4**
- BiSecur radio system with extremely secure encryption protocol
- Idle mode with deactivated radio

Ideal for retrofitting

- Flexible fitting by clamping, gluing or screwing on the interior of the door
- No damage to the door or frame (ideal for rental apartments)
- Simply attach to the inserted key***
- Wireless installation thanks to battery operation (lifecycle approx. 1 year**** for 8 cycles per day)

Door lock is locked

Door lock is unlocked

* Optional BiSecur Gateway required

** Cylinder with emergency and hazard function required

*** Cylinder projection of 7 – 12 mm necessary on the inside, the key head must be shortened to a length of 4 – 7 mm

**** Depends on the door or lock's ease of movement as well as the batteries used!

Open and close doors effortlessly

With Hörmann door operator PortaMatic, you can open and close your timber and steel internal doors automatically via hand transmitter or button. Whether you are physically disabled or would simply like more convenience – this technology will make your everyday life easier. The door operator PortaMatic features not only an array of functions and settings, but also minimal power consumption. In addition, the PortaMatic is up to 25 % cheaper than similar door operators and can be subsidised up to 100 % by your nursing care insurance.

Find out more about support options at <http://www.hoermann.de/portamatic/zuschuss>

For additional information, consult the PortaMatic door operator brochure.

Senior-friendly residences

Would you like to stay mobile despite physical limitations? The PortaMatic operator for internal doors improves your quality of life by helping you move about your home unaided.

Convenient living

You can now carry full trays, heavy crates of beverages or your shopping bags into your rooms unhindered. You will never want to do without this convenience ever again.

Barrier-free working

Barrier-free working is already of great importance and will become even more significant in the future. The PortaMatic door operator can be easily integrated into all non-public areas at your workplace, thus ensuring more convenience.

Hygienic door operation

In office buildings, the risk of infection among employees is especially high on doors leading to the lavatory. In combination with a non-contact switch, the PortaMatic door operator provides reliable protection from germs and bacteria, giving you a sense of security.

The robust steel frame VarioFix

In addition to the standard timber frames, all our apartment entrance doors are also available with the steel frame VarioFix. It is the ideal solution for apartment entrance doors and internal doors in the home and project sector where high resistance and durability are necessary.

The VarioFix frame harmonises perfectly with other timber frames due to the frame face of 55 mm on both sides. This way, you can also use doors with different frames in one room or house.

For the steel frame VarioFix, wall tolerances of up to 20 mm are no problem. The adjustable decorative rebate easily compensates for different wall thicknesses during renovations and new construction projects.

The VarioFix frame is available in Traffic white RAL 9016 to match our door leaves in Duradecor White lacquer, White lacquer and RAL to choose.

The frame face of 55 mm on both sides of the VarioFix frame (fig. left) harmonises very well with timber frames (fig. right).

The VarioFix frame is especially robust and can withstand "accidents" with toy cars or run-ins with the vacuum cleaner.

The VarioFix frame is also suited for apartment entrance doors with RC 2 security equipment and acoustic insulation.

VarioFix: the steel frame with many benefits

Especially resistant to damage ¹

The robust VarioFix frame can also take a collision with a toy car or your vacuum cleaner. In such cases, edges on timber frames can be damaged or even chipped.

Resistant to cleaning water ²

The VarioFix frame is the perfect solution for rooms with tiled floors. Thanks to the high-quality galvanization, even cleaning water cannot damage the frame. With timber frames there is a danger that the bottom frame edge will swell or that it must be sealed with an unattractive silicone joint.

Invisible mitre cut ³

For the powder-coated steel frame VarioFix, the corner joints feature high-quality welding and a flush polish, meaning there are no visible mitre cuts in the frame corners, in contrast to timber frames.

Uniform gap dimension for flush-closing doors ⁴

Due to the stable steel construction, the VarioFix frame cannot warp after fitting. This guarantees a uniform gap dimension for flush-closing doors and ensures a harmonious and elegant door appearance.

Our space-saving marvels: sliding doors

Sliding doors open up new possibilities for ideal use of your living space.

Hörmann offers single-leaf and double-leaf sliding door solutions for every living situation. All door styles in the BaseLine, DesignLine and GlassLine ranges are available as sliding doors.

Sliding door system in the frame

When fitted in front of the wall, the door leaf slides on two tracks mounted in the sliding door box. When fitted running within the wall, the tracks are fitted in an on-site door pocket in the wall. This eliminates the sliding door box. The wall opening is concealed by the frame.

With the brush on the door leaf (figure on left) and the optional inlet seal in the frame (figure on right), Hörmann sliding doors with frame type C running in front of the wall offer optimal protection against odours, noise and draughts – for even more comfort in your own home.

Sliding door system Slide Compact

With this system, the door leaves slide in a guide rail profile. The profile in a stainless steel colour can be fitted both in front of the wall and on the ceiling. For a door leaf weight of up to 60 kg, the Slide Compact system is equipped with a SafeClose in order to gently close the door leaves.

Sliding door system Rotan

In this trendy industrial-style sliding door system, the doors are mounted on support brackets that slide over rollers on a track rail. The stainless steel rail is fitted on the wall.

Sliding door system Slide Compact with additional vertical stop for single-leaf doors, running in front of the wall ■ **NEW**

The profile is also available in matt black, including the handle bars. For further information, see page 84.

Cool chic, elegant function: With the sliding door system Rotan, the support brackets slide over rollers on the track rail.

Glazing cut-outs

With our selection of glazing cut-outs, you can take your favourite style and make the personalised door of your dreams. Glazing cut-outs are available in the glazing of your choice.

Side elements and transom lights

Side elements and transom lights flood your living spaces with light for that special flair. While side elements visually enhance the door sets, transom lights emphasise the room height. Transom panels underscore the ceiling-high appearance of the door set.

Glazing cut-outs

All door styles in the DesignLine Georgia, Vermont and Carolina ranges are available with glazing in the upper panels.

Side elements
(intel-high)

Transom lights

Individual wishes within reach

We are only satisfied when you have found your dream door, where every detail is right. For this reason, you can choose your handles and fittings individually from a wide-ranging Hörmann programme: The range of **lever handle sets for timber doors** can be found in our programme optionally as a flush-fitting **Planar version**, for the most elegant view. For design fans, we recommend lever handles and fittings **in the new black.edition**.

Special fittings for **all-glass doors** and **sliding doors** round off the extensive range.

For an especially elegant door appearance, all lever handles are optionally available in a flush-fitting Planar variant, as well as without drilled keyhole.

Black is on trend!

Dark colours with black accentuation are becoming increasingly popular. Hörmann now offers a range of fittings in the new black.edition for timber and all-glass doors, producing a very attractive contrast on lighter surfaces!

Elegant all-glass door fitting

This innovation for all-glass doors can be used with timber and with steel frames. The reduced view of the fitting profile makes a very elegant impression. Practical: lever actuation is not necessary to open the door.

Premium carpenter quality for high demands

1 Attractive appearance with precision fit and installation-friendly corner joints

Lining board

- Screwed corner joints with lining board connection
- Easily readjustable
- Strong friction locking

Cladding

- Solid-metal screw connectors
- Excellent friction locking
- Direct pressure distribution on the connection surfaces
- No visible drilled holes in the cladding

2 High form stability thanks to the robust frame design

- Lining board 25 mm thick
- Lining board with Duradecor surface finish
- Melamine-coated backing
- Claddings made of MDF

3 Permanently quiet closing thanks to a high-quality seal

- Two-chamber system
- Clean contact to the door leaf
- Good absorbing properties

4 Robust standard lock plate for added security

- Movable back lining
- Secured with six screws
- Double-turn locking
- Conversion sets available

5 Hybrid hinge pocket prevents lowering of the door

- Carrying capacity 80 kg
- Reinforced metal plastic mount **■ NEW**
- Four-point screw fixing in lining board
- Guiding sleeves extending to front edge of cladding
- For timber and all-glass doors

6 High stability thanks to door leaf with frame reinforcement

- Internal doors with 80 mm frame reinforcement
- On hinge side and lock side

7 Attractive round edge due to high-quality base materials

8 Robust angular edges thanks to 4Protect edge protector

- High impact resistance
- High wear resistance
- High scratch resistance
- Perfect joint-free look, meaning that unlike conventional doors, no visible joints **9** disturb the high-quality appearance of the door
- As standard for rebated doors with angular edges or flush-closing doors with Duradecor White lacquer, Light grey and Anthracite surface finishes

10 Modern colour

- In standard colour White lacquer RAL 9016

Strong Duradecor surface finish

- Extremely resistant to impact and scratching
- Colour-fast, heat-resistant

Door inlay

Honeycomb insert	Tubular chipboard spacers	Tubular chipboard plate	Solid chipboard

Honeycomb insert

The honeycomb insert retains its shape and has an excellent price-performance ratio.

Tubular chipboard spacers

The door inlay consists of individual spacers that are arranged in the best possible layout. This means the door leaf is especially sturdy and suitable for heavy wear.

Tubular chipboard plate

The solid plate with horizontal tubes gives door leaves high surface stability. These high-quality internal doors are suitable for even heavier wear.

Solid chipboard

The high-quality solid chipboard door leaves have the highest leaf rigidity and are suitable for especially heavy wear. Doors with glazing cut-outs are available with solid chipboard as standard.

Frame types

Profile frame with rounded edges

Profile frame with angular edges
(only for lacquer surface)

Profile frame with profile for
ClassicLine Georgia and Carolina

Block frame

Door leaf

- Approx. 40 mm thick
- Frame construction made of solid timber / timber material with additional frame reinforcement, can be shortened by 25 mm at bottom
- For double-leaf doors: with counter rebate*
- Climatic class I Duty category N to S (according to version)
- Ready-to-hang acc. to DIN 18101
- Suited for timber profile frames or standard frames made of steel

Frame

- Rebate cladding 16 x 60 mm, mitred and firmly glued to the jamb lining. 16 x 80 mm on request
- Jamb lining made of 25 mm chipboard, rebate cladding and decorative edge made of 12 MDF boards
- Decorative edge 16 x 60 mm, optionally 16 x 80 mm
- Adjustable for wall thickness - 5 mm / + 15 mm
- Sound-absorbing seal inserted at the factory, mitred
